

ABSTRACT

The method is used for transporting bodywork panels (12) of a vehicle by means of an endless transport device (10), equipped with a plurality of carrier units (16) that are spaced at intervals in the transport direction (14). In this case, provision is made for an associated group (18) of panels to be stacked on at least one carrier unit (16), for the group (18) of panels to be transported as far as a panel removal station (20) and in each case for an individual bodywork panel (12) to be removed by a panel separation device (22) at the panel removal station (20).
